agilesTrade is your daily tool for planning and management of all activities in international trade.

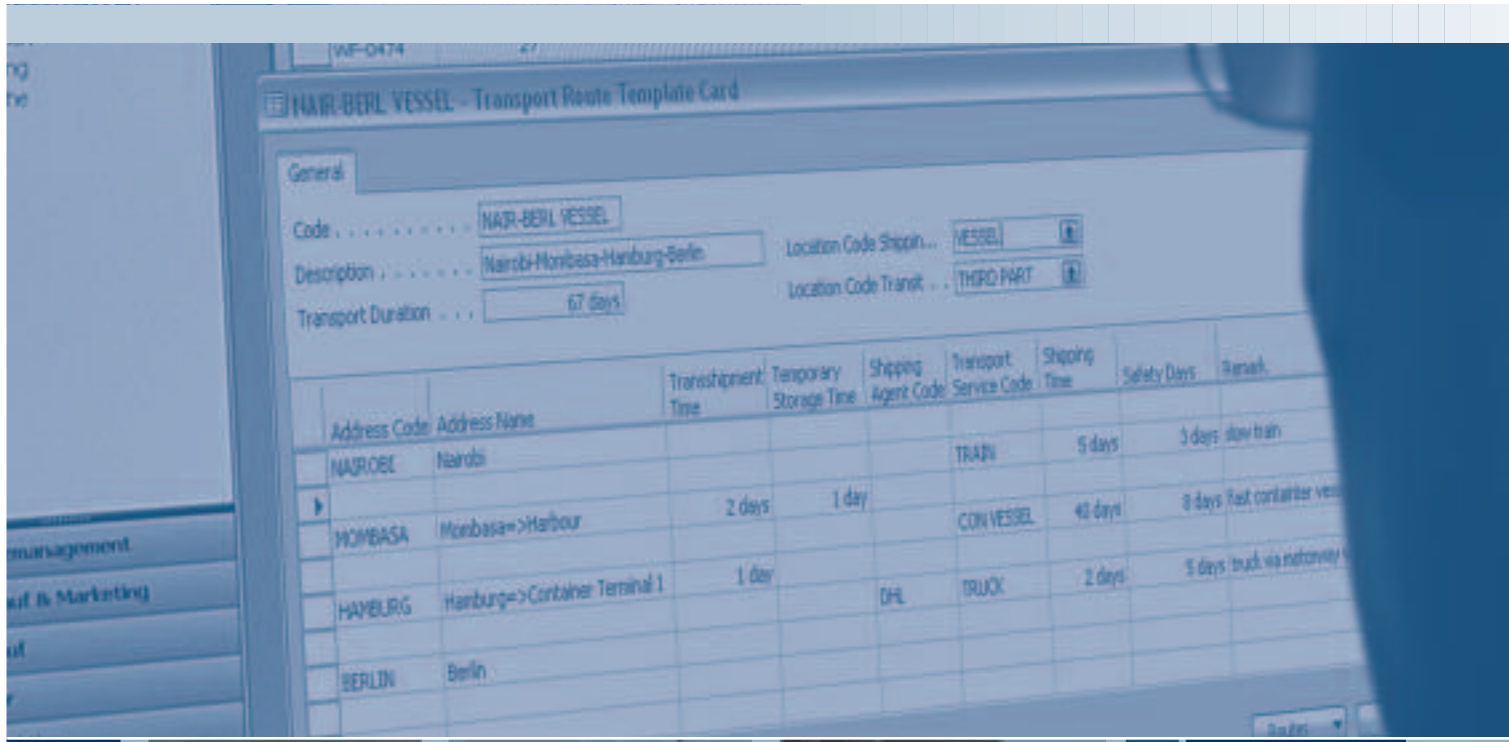

International trade operates by its own, specific rules. Being aware of them is your advantage. Allowing them to work for you consistently may be your key to success. With agilesTrade you have at your disposal a professional software solution that we specifically developed for your business.

**agilesTrade really knows the game of international trade.**

**To deal you a winning hand.**

agilesTrade extends the standard scope of the Microsoft Dynamics NAV business software by sophisticated features in the fields of buying, materials management, sales, processing, and financial management. These include, for instance, administration of master purchase and sale agreements, credit operations, batch and cargo tracking, dynamic routing and scheduling, load planning and tracing of shipments, as well as location structure, and web integration.

agilesTrade lets you gain a valuable competitive edge: you cut your administrative cost. You improve internal and external communication. You enhance quality and productivity. In short: You increase the efficiency of your business and create more scope for development.

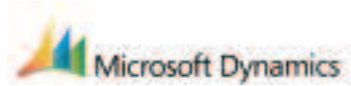

**agilesTrade turns international trade into child's play.**

agilesTrade is based on the standard capabilities of Microsoft Dynamics NAV. Your specific benefit: you can start working right away. Because you are familiar with the user interface from other Microsoft applications you are already using every day.

An agiles software solution may be adapted to your company quickly and easily. It is user-friendly and offers a high degree of compatibility and good long-term return on investment.

Choose agilesTrade – the software solution for more efficiency in your company.

**Complex business operations become transparent.**

**Allowing you to make fast decisions.**

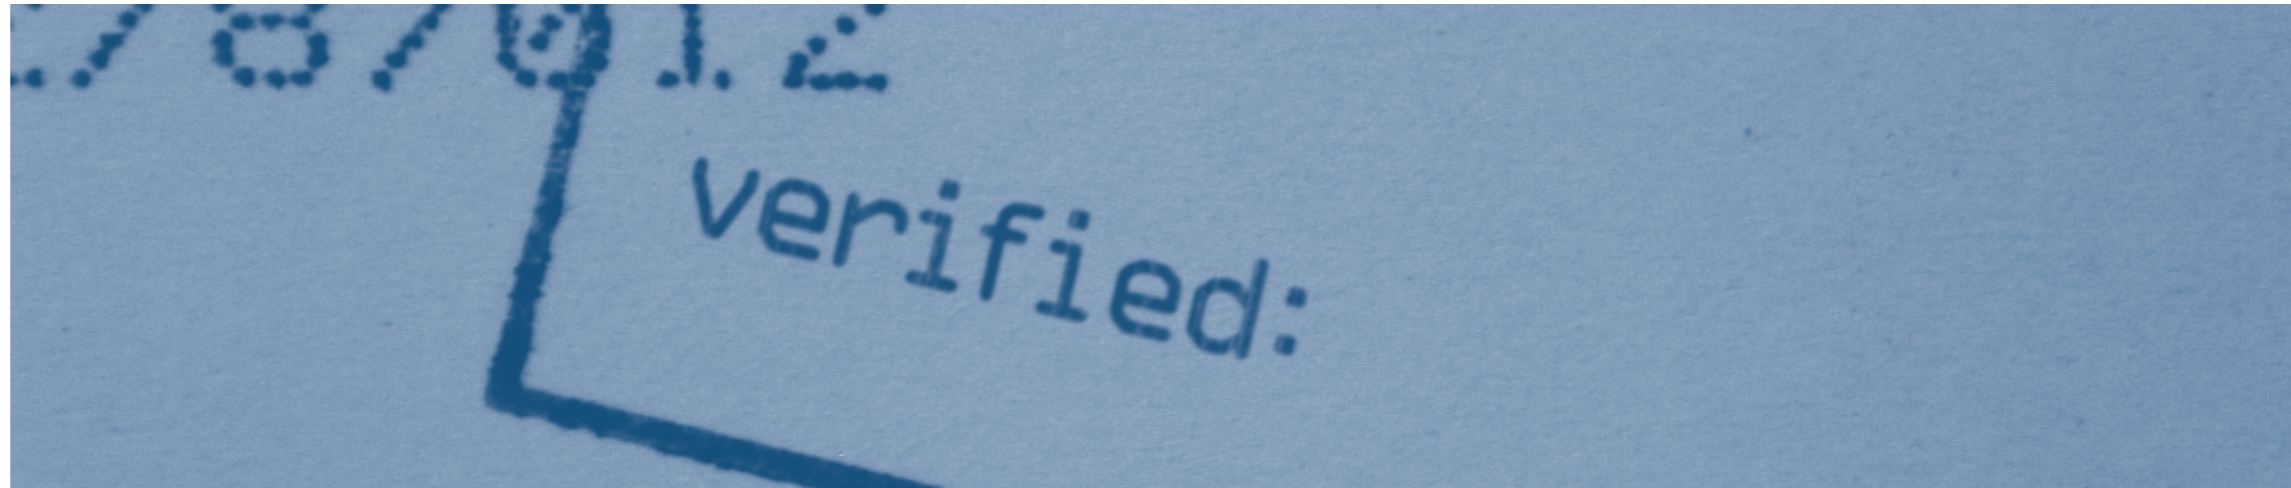

From the start, agilesTrade is a versatile tool for your business. This software solution covers the most important areas of operation in your industry.

#### Easy compilation of basic data

- > Expansion of standard data by features specific to your industry (e.g. client and supplier hierarchies, EAN number administration, text management).
- > More management options due to clearly arranged, easy-to-distinguish life cycles of suppliers, clients, or products.
- > Development of a tailor-made information pool on the basis of individual attributes, e.g. for products.
- > Quality assurance due to simple target-performance comparisons based on adjustable lists for relevant documents all along the supply chain.

#### Transparent procurement

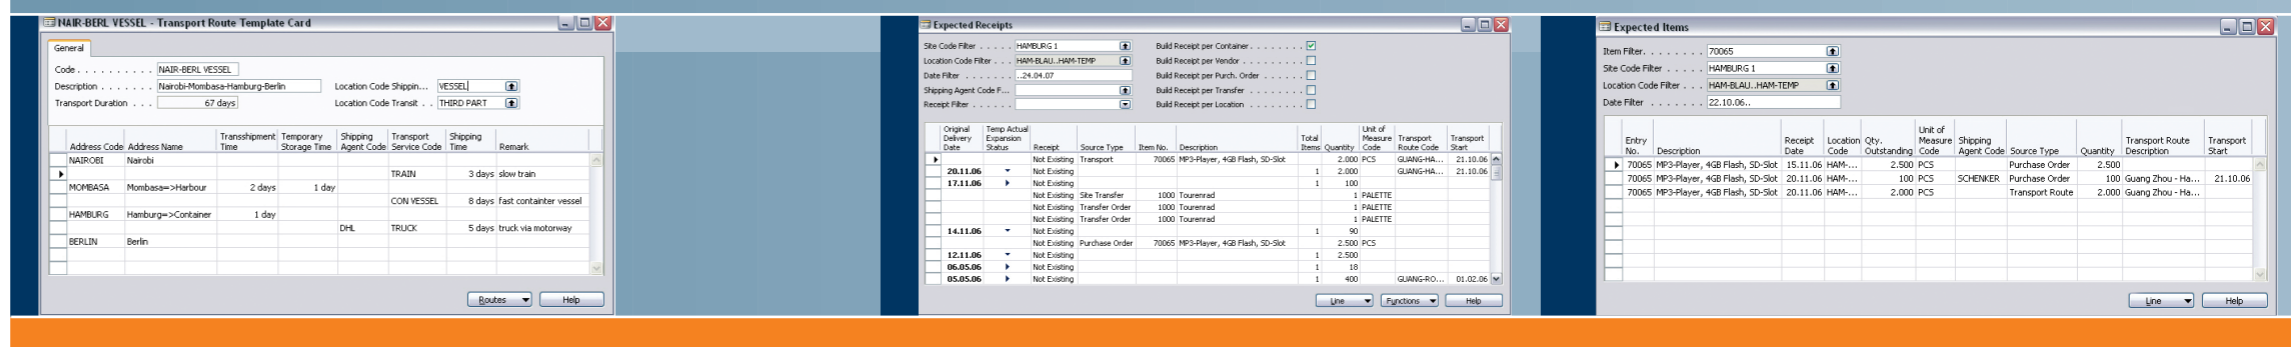

- > International monitoring of products from sourcing to final conformity check.
- > Documentation of order processing by manufacturer, quality service provider, shipping agent, freight carrier, and finally your client.
- > Shipment of goods via routing, travel, or transfer addresses, or your own carrier.
- > Calculation and monitoring of transit times.
- > Supervision of temporary warehouses.
- > Automatic duty calculation before data exchange via different customs systems eg. NCTS.
- > Administration of credit operations.
- > Incorporation of data and operation of external service providers.

Every shipping order is listed complete with data and all details.

Fast overview of all stock receipts – even for several locations.

Precisely monitoring the flow of commodities enables efficient routing.

#### Efficient materials management / Sales

- > Increased customer satisfaction due to dynamic ordering and distribution processes based on available and future stock.
- > Monitoring recalls and deliveries, delivery rates and contractual penalties for added security.
- > Enhanced transparency of out-of-stock items through automatic clearance routines.
- > Support of routing and scheduling along with a reduction of warehouse stock via optional integration of a prognosis system.
- > The elaborate authorization system guarantees the security of your data for trustworthy operations.

#### Integrated processing

- > Electronic exchange of data and records.
- > Flexible integration of current billing systems.
- > Optimisation of cooperation between departments.

#### Successful teamwork

- > Timely provision of all documents by linking attachment administration and workflow management (agilesWorkflow).
- > Optimised quality management via direct access to current documents.
- > Simplification of decentralised internal and external cooperation via provision of online data and SharePoint websites.
- > Integration of external partners via e-mail, EDI interface, or web portals.

The portfolio of services provided by agilesTrade can be adapted to your individual needs. We will analyse any given project with you to decide which business operations are to be supported by the software. If needed, we will advise you regarding a possible process optimisation. You are welcome to express all preferences with respect to your new software. We will then assess the viable options.

Integrating your employees and teams into this project at an early stage will meet with their acceptance – the first step towards successful implementation of new software.

**Introducing new software will earn your company more profit.**

**That is our mission.**

Looking for a one-stop shop for software solutions? With individual components seamlessly fitting together? And people who listen when you are talking about your ideas for the future? Welcome to agiles.

We develop integrated software solutions that really move your business. Based on a detailed needs analysis we develop a solution for you, take care of adjustments all the way to final implementation. With your cooperation, we assess the feasibility of our findings, develop sound concepts and implement them. That's what we call a one-stop shop.

Our experience has shown that during the course of a software project basic questions tend to arise regarding corporate organization and process management. That's why we also offer management consultancy, coaching, training, and support.

Since 1989 we have realized numerous projects. Catering to a wide range of customer preferences along the way.

Let us know about your idea of cooperation, of ideal process management, and software solutions which can bring you even more success.
